SUMMARY

Industrial Chemist with a Master's in Materials Science, specialized in nanomaterials for optoelectronic water sensors applied to industrial water quality assurance. Experienced in interdisciplinary research combining materials development, contaminant analysis, and data processing with Python, aimed at solving real-world environmental challenges.

PROFESSIONAL EXPERIENCE

Robotics teacher (High School)

Aug 2023 - Jun 2025

- Taught robotics and programming to high school students using the STEM-based FIRST Lego League methodology, fostering technical and problem-solving skills through hands-on projects.

Research stay at institutes of CSIC (Barcelona, Spain)

Sep 2024 - Dec 2024

- Developed carbon nanomaterials for the detection of nitrates in water, contributing to a project with direct applications in optoelectronic sensors.
- Applied advanced material characterization techniques, which included electron microscopy and spectrophotometry, and analyzed and processed spectral data using Python, which expedited the project's interpretation of results.

Laboratory analyst

Jun 2020 - Jan 2021

- Performed quantitative analysis of food samples to determine nutritional content, ensuring data accuracy through strict adherence to laboratory protocols.

PROJECTS

Spectrum Data Loader - Python Package (PyPI)

[Link to Project](#)

Developed and published a Python library to simplify the loading and initial processing of spectroscopy data files.

EDUCATION

2023–2025 M.Sc. in Materials Chemistry, Autonomous University of Nuevo Leon, (Grade: 94.44/100)

2019–2022 B.Sc. in Industrial Chemistry, Autonomous University of Nuevo Leon, (Grade: 82.69/100)

PUBLICATIONS

SKILLS

Technical Skills

Nanomaterial and Organic Synthesis, Material Characterization, Programming analysis, Quantitative Analysis.

Programming & Software Languages

Python, Git Bash, L^AT_EX, MS Office Suite, Inkscape, ImageJ.
Spanish (Native), English (Advanced), French (Beginner).
